We are a part of nature

Temptations of the modern world distract us every day from what is primal: nature that surrounds us. At Buglo, we aim to direct children's attention and sensitivity towards nature and the environment. We are deeply convinced our activities have a significant impact on shaping their respect to the world around us: the animals and plants that inhabit it. I believe playing outdoors has a very positive effect on the youngest and the way they develop.

Our recently premiered collections – Flora Play and Organiq – draw direct inspiration from fauna and flora. Careful observation of our surroundings has motivated us to create series that showcase their full potential in harmonious arrangements. When combined with Robinia wood elements, they form a cohesive natural space that brings joy to the youngest children.

The concept of respecting nature permeates every stage of our product creation – from the use of recycled materials to the conscientious organisation of production processes, designed to be as planet-friendly as possible.

Buglo distributors, operating all over the world, share these values. Ensuring that children playing on our playgrounds experience joy is just as important to us as ensuring that spaces for the youngest support their development. As awareness grows with development, it becomes essential to live in harmony with nature. This harmony is what I wish for both you and our young friends around the world.

Bartosz Krzemiński
CEO

Inspired **by nature** In harmony **with nature**

Fun while respecting nature? Always! We keep the environment in mind at every stage of product creation. It is a source of inspiration, materials and a place where playgrounds are located.

WE USE FSC-CERTIFIED WOOD.

ALL PRODUCTS ARE AVAILABLE
IN THE RECYCLED LINE VERSION.

WE EDUCATE THE YOUNGEST
ABOUT ECOLOGY.

WE WORK IN AN ENERGY-EFFICIENT
BUILDING.

OUR FLEET INCLUDES HYBRID CARS.

Let's **Buglo**

„The latest collections began with observations of the world around us. Nature proved to be an endless source of inspiration. The entire Flora Play series is the result of our fascination with the shapes of pampas grasses, reeds, and miscanthus. Numerous drawings and close cooperation with designers, as well as safety standard experts led to the creation of this unique series.”

Krzysztof Rembeliński
Graphic Department Manager

„When selecting materials from which devices are made, we focus not only on their quality and safety but also on the method of obtaining them and their impact on the planet. Our recent collections are rich in recycled and natural materials. It is of utmost importance to us that our suppliers share our values and treat the environment with due respect and care.”

Mariusz Starczewski
Research and Development Manager

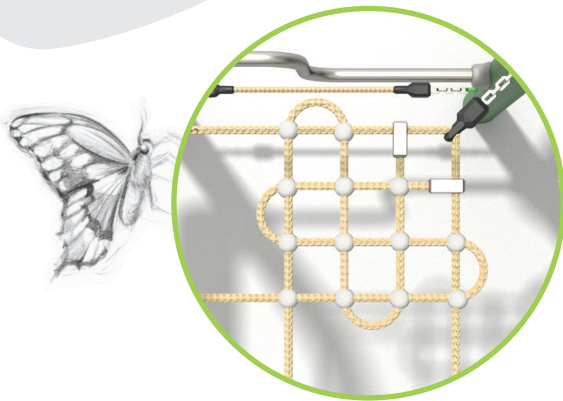

Flora Play

The collection combines unique design, which is an artistic interpretation of natural elements in the surroundings, with functionalities that encourage exploration of the world. It provides developmental fun that fosters a sense of closeness to nature.

COLOUR WAVE MASTER

A painting technique that allows the combination of two colours, smoothly blending into each other, enabling the achievement of a natural colour fusion effect.

Organiq

Animals have become companions in many children's games. They inspire, integrate, and stimulate the imagination of the youngest. Devices from the Organiq series will allow you to create both a mysterious jungle and a underwater land full of fun.

SHAPE
WAVE MASTER

A pipe-bending technique that allows for the maintenance of a smooth steel surface.

Robinia Play

Natural Robinia wood is at the heart of this collection. Its texture stimulates the senses of the youngest children, and the material itself brings them closer to nature.

Black locust wood does not require impregnation. Natural oils protect it against weather conditions, keeping it looking good for years.

Recycled Line

We do not live in a vacuum. We have a responsibility for the impact of our activities on the environment. Almost all available devices are made from materials originating from recycled waste and sustainable crops.

**ALL PRODUCTS ARE AVAILABLE
IN THE RECYCLED LINE VERSION.**

What are Recycled Line playgrounds made of?

The biopolymers used in the roto-moulding process are made from 50% sugar cane, which absorbs carbon dioxide as it grows, reducing the amount of carbon in the atmosphere.

The wooden poles are made from FSC-certified, sustainably grown timber. Timber is harvested in a way that limits the degradation of forest resources.

Recycling steel saves 40% of water and significantly reduces emissions to the air (86%) and water (by 76%).

The walls are made of recovered and recycled marine waste, such as fishing nets, ropes, or trawls. The materials used leave a carbon footprint up to 86% smaller per kg of waste recovered.

Produced in the heart of Europe,
appreciated all over the world.
